

InVoCell[®]

AND YOUR FERTILITY JOURNEY

When facing fertility challenges, some of the options most commonly offered to women are intrauterine insemination (IUI) and in vitro fertilization (IVF).

INVOCELL was designed to give women, and their partners, another option on their fertility journey.

Here is how IVC with INVOCELL could fit among some of the options used in fertility treatment.

Lower
average
costs

In one study, IUI was reported to have an **8-10% rate of success**, with success defined as pregnancy rates per cycle, including live births and ongoing pregnancies.

IVC WITH INVOCELL

~25%
SUCCESS

A clinical trial of IVC with INVOCELL resulted in about a **25% success rate**, which was defined as the number of live births per embryo transfer.

IVF
48%
SUCCESS

In nationally reported data, IVF demonstrated up to a **48% success rate**, where success was defined as the rate of live births per cycle.

Higher
average
costs

INVOCELL may be for patients seeking an option based on:

AFFORDABILITY An INVOCELL cycle is typically less expensive, saving patients up to 40% off the traditional costs of IVF.

CONVENIENCE An INVOCELL cycle requires significantly less appointments than traditional IVF.

INVOLVEMENT The use of mild ovarian stimulation and using your own body as an incubator provides a **unique approach** that allows you to be an even greater part of the process.
